What is Helm?

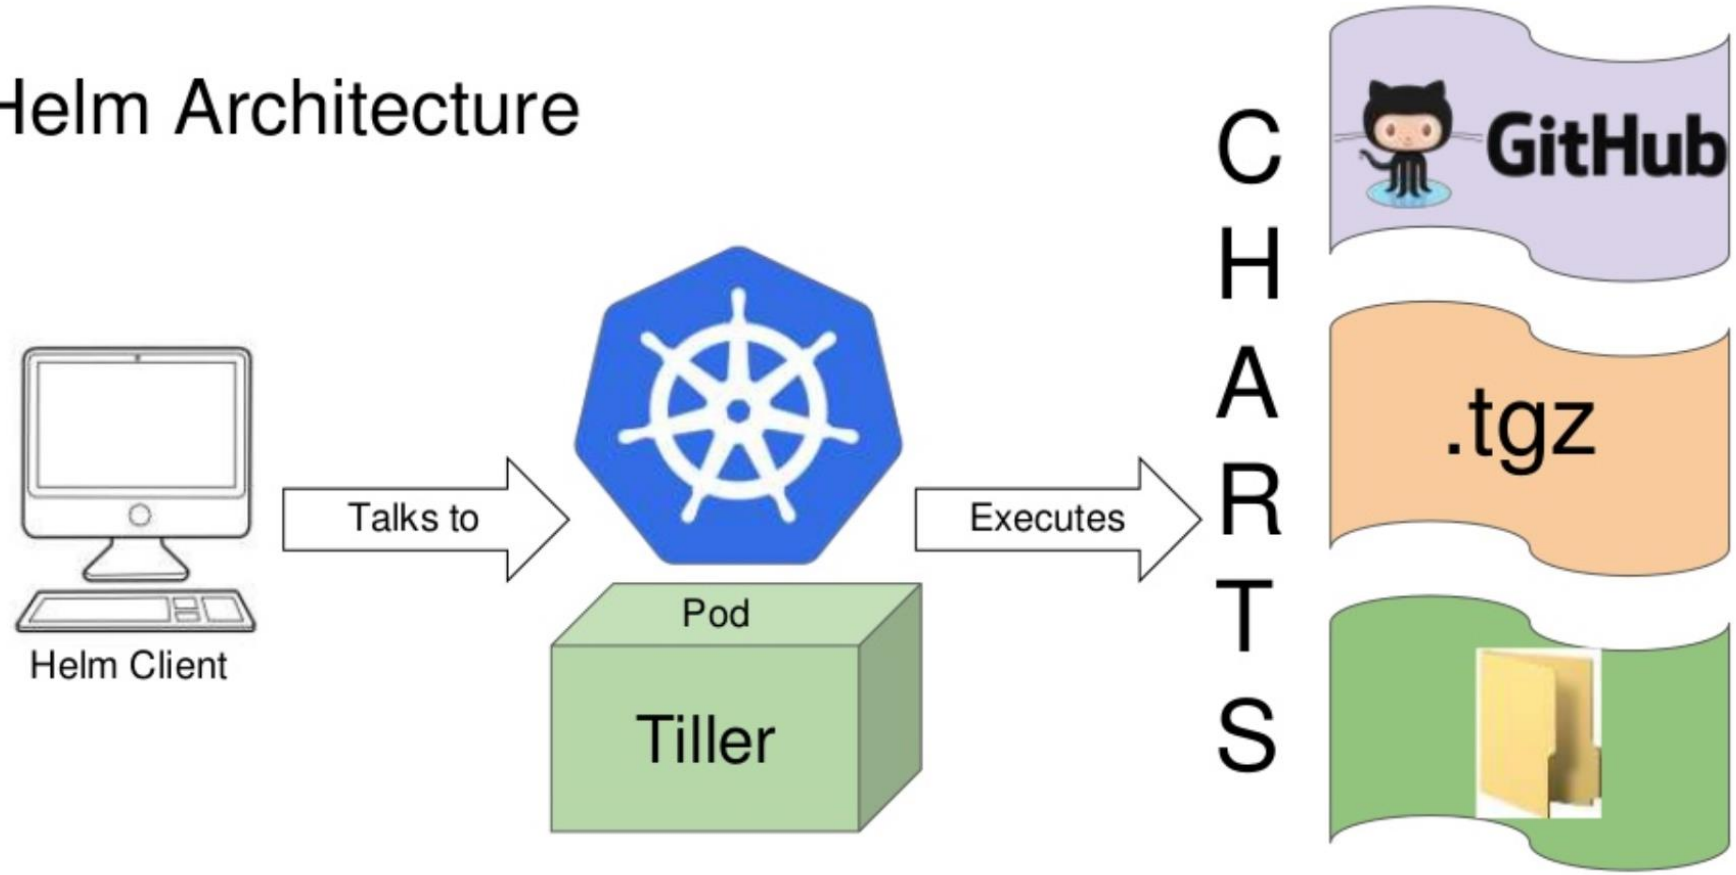
Helm is a package manager for Kubernetes.

It allows easy installation and management of Kubernetes applications.

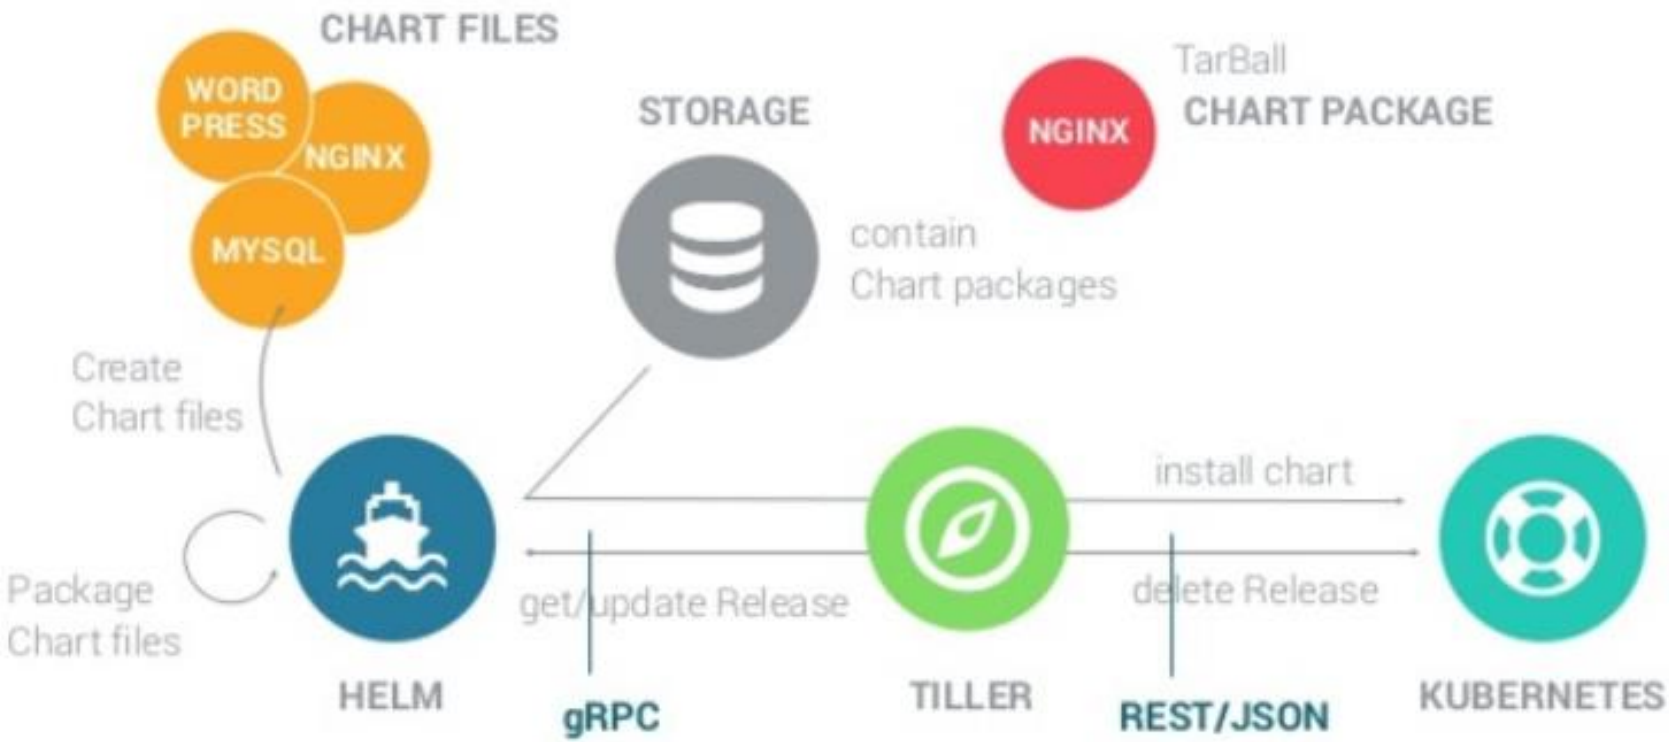
What is Helm?

- Helm is a ***Package Manager*** for Kubernetes
  - package multiple K8s resources into a single logical deployment unit: ***Chart***
  - … but it's **not just** a *Package Manager*
- Helm is a ***Deployment Management*** for Kubernetes
  - do a repeatable deployment
  - management dependencies: reuse and share
  - manage multiple configurations
  - update, rollback and test application deployments (***Releases***)

Helm Architecture



Helm Architecture



```
$ helm init
```
